

Infinium bikes use a stackable battery system so you can add extra batteries for greater range (an extra 25-33 miles per cell, each weighing 1.8kg). Each sits above the back wheel in the luggage rack. A throttle lets you travel without pedalling. There's a backlit display on the handlebars which shows speed and battery strength. This bike is a decent ride with 26in wheels, though pricier models here offer greater comfort and extra features.
