

electric bike e bike 100km

## Motor options

There is no denying that e-bikes bring a whole new dimension to the term drivetrain, and with them come new players to the world of mountain biking. Bosch, Brose and Yamaha are vying for pole position in this burgeoning category, so for this test we selected three full-suspension bikes from the biggest conventional players, albeit each with a different motor.

First up, we have the [Giant Full E+ 1](#) at 3,199 with the Yamaha X94 Motor. It's the only bike on test not to have Plus-size tyres, so it'll be interesting to see if that works in its favour.

Brose is represented by the [Specialized Turbo Levo FSR Comp 6Fattie](#) at 4,000. With its integrated approach to design, it's undeniably one of the best looking e-bikes to date.

The final bike in our trio is the Bosch-equipped [Trek Powerfly 9 LT Plus](#). At 4,350 it's the most expensive bike in the test, but it also has what looks to be the best specification and sizing.

So, three new electric mountain bikes; each guaranteeing to turbocharge your ride and provide electrical assistance to ease the miles, but which one will light up the trails? Let's find out...
